Summary

Senior Software Engineer specialising in AI tooling platforms, MCP integrations, catalog architecture, and governance for enterprise developer workflows. Built reusable foundations for AI Toolkit adoption across SEEK, with hands-on work across tool lifecycle management, custom catalogs, MCP onboarding, and platform standards.

Experience

Senior Software Engineer - Developer experience, *SEEK* – Kuala Lumpur Dec 2025 - Present

- Led the build of AI Toolkit, an org-level platform for AI-assisted engineering, with foundations for rules, context engineering, agents, and skills.
- Shaped toolkit lifecycle management to support adding new tools, versioning existing ones, deprecating outdated versions, and pruning low-value or unused tooling.
- Worked on foundational catalogs so team-maintained AI content for common SEEK-wide tools could be discovered and installed through the main toolkit experience.
- Improved discoverability and developer UX through Backstage catalog work and related internal platform improvements.

Software Engineer, *SEEK* – Kuala Lumpur May 2024 - Dec 2025

- Developed and launched web application community feature, implementing server-side rendering and SEO optimization for 2+ million monthly active users.
- Designed and implemented a foundational services platform using event-driven architecture and modular distributed systems, consolidating shared services into a unified platform used by multiple engineering teams.
- Architected a GenAI integration service enabling production AI capabilities across teams, leveraging AWS and establishing reusable enterprise patterns.

Backend Engineer, *BigPay* – Kuala Lumpur Aug 2023 - Mar 2024

- Implemented a real-time fraud detection service using third-party integration, enhancing payment security across multiple channels.
- Engineered payment processing features using Rust and Java, ensuring system reliability for high-volume transactions.

Software Engineering Intern, *HomeCrowd* – Kuala Lumpur Jul 2022 – Oct 2022

- Migrated the database from MySQL to PostgreSQL enhancing data retrieval times and system performance.
- Created smart contracts facilitating peer-to-peer lending and streamlining data flow.

Skills

Languages: Java, TypeScript, JavaScript, Go, Rust, Python.

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Infrastructure as Code.

Tools: Git, GitHub Actions, Buildkite, Kafka, Redis.

Certifications: AWS Certified Solutions Architect, AWS Certified Developer

Education

University Putra Malaysia Bachelor of Computer Science, Minor in Computer Systems
